

Paediatric Intensive Care (PICU) Nutrition Priority Setting Partnership - Final Survey

Thank you for taking the time to complete this important survey. Children admitted to PICU are often unwell and for lots of reasons unable to drink and eat as usual. We want to know what questions you feel are important for research to answer in relation to feeding in PICU.

We want to hear from you if you are (or used to be):

- A parent/caregiver to a child who is/ was hospitalised in a PICU?
- A young person who was hospitalised on a PICU?
- A healthcare professional that takes care of children in a PICU?

What are we asking you to do?

We have listed 41 questions identified by patients, carers and healthcare professionals who feel more research on PICU Nutrition is needed.

Please read the list and tick the questions you think are most important for researchers to answer based on your own experiences and opinions.
